CONCEPT

Exclusively distributed in North America by **ARCONAS**

Inspired by the Nordic archipelago

Pelago is a modular seating solution designed to bring clarity and connection to public spaces. Inspired by the Nordic archipelago, its flowing contours and rounded design invite calm and interaction, even in the busiest environments. With eight intuitive modules, including seating, planters, and bins, it offers one unified concept that replaces fragmented furniture solutions with a cohesive design language. With optional integrated charging and a broad palette of colours, it becomes more than a solution: it's a design canvas.

Each component is lightweight, durable, and designed for easy maintenance, ensuring the system evolves gracefully over time while reducing environmental impact. From compact clusters to large-scale compositions, Pelago can be combined, expanded, or reconfigured effortlessly, delivering visual harmony at every scale and transforming complex planning into an intuitive, flexible process.

NATURAL COMPOSITIONS

The Nordic archipelago served as the starting point for the design journey. This landscape of interconnected yet independent islands inspired a seating solution defined by soft, rounded contours and fluid modularity. Just as each island in the archipelago belongs to a cohesive whole, the modules come together to create inviting, intuitive compositions across public space.

A BIOPHILIC OASIS

Pelago incorporates biophilic design elements that bring the calming presence of nature into even the busiest public spaces. The planter modules integrate harmoniously with the seating solution, introducing greenery that softens architectural lines and adds warmth and tactile character.

ENDURING EVERY DAY

Pelago is engineered to withstand daily use in high-traffic environments without compromising on aesthetics. With a 15-year warranty and easily replaceable components, it is designed for longevity, low maintenance, and adaptability, ensuring it continues to perform and inspire for years to come.

ONE DESIGN LANGUAGE

Pelago integrates planters and bins within one cohesive solution. Each element preserves the sculptural aesthetic, while a choice of over 80 wood finishes and any RAL metal color offers design freedom and a unified visual expression.

ELEGANCE IN EVERY CURVE

Every detail of Pelago is designed to create a sense of calm and cohesion. Its smooth, double-curved plywood contours give each module a soft, sculptural presence while hidden screws and bolts maintain a minimalist aesthetic.

DISCREET POWER

To meet the needs of modern public environments, Pelago offers discreet charging points that allow users to power phones and devices without interrupting the clean, sculptural silhouette of the furniture.

UNIFIED BY DESIGN

This seating concept replaces the typical patchwork of fragmented public furniture with one unified, comprehensive solution. It unifies seating, planters, and bins within a single design language, ensuring visual harmony across every corner of a space. Whether used in compact nooks or expansive layouts, it brings functional clarity and aesthetic consistency, creating environments that feel intentional, branded, and beautifully connected.

EVOLVE WITH TIME

Pelago offers a rare level of flexibility, like a creative toolkit that evolves with its surroundings. Its modular design allows for quick configuration and reconfiguration, making it ideal for spaces that constantly change. Much like a LEGO system, the modules can be arranged, added, or repositioned with ease, empowering planners and designers to respond instantly to shifting needs while maintaining a cohesive, intentional design language.
