

ARCONAS

---

## Universal Design Public Furniture

[arconas.com](http://arconas.com)

Arconas has the seating, counter, and power solutions to help your facility become barrier-free.

## ACCESSIBLE SEATING

For lateral transfers from a wheelchair, the outer arm is removed from a seat position at the end of the row.

## REDUCED MOBILITY SEATING

Through the use of a special bracket, it is possible to raise any Bernù Aero seat. A raised seat position assists persons with reduced mobility (PRM\*) to transition in and out of the chair with greater ease. The recommended ergonomic seat height for persons with reduced mobility is 19" / 480mm above the floor.

\*European standard only

## ACCESSIBILITY SIGNS

Accessible seats are labeled with an internationally recognizable accessibility sign to indicate that the seat is reserved for persons with reduced mobility. The sign is positioned on the backrest to make it clearly visible.

## END-MOUNT POWER

inPower™ Flex modules for charging electronics are available on back-to-back seating units, allowing a person in a wheelchair to access the outlets at arm height.

## WHEELCHAIR ACCESSIBLE INPOWER™ BAR

Wheelchair accessible inPower™ Bars are made with a lower counter height (32") and legs positioned wider apart (30") to accommodate a wheelchair and meet accessibility guidelines. This offers direct access to power and a table surface for working and/or eating. Power is available from both sides and counters can be identified with wheelchair logo graphics or other.

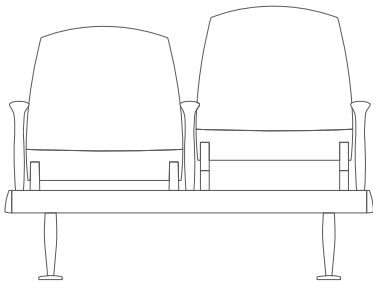

## REFITTING OR RETROFITTING

If a terminal is already furnished with Bernù Aero series seating, Arconas can refit and raise the seats of the existing installations to meet PRM\* requirements.

\*European standard only
